The AI Food Chain

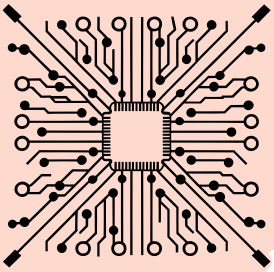

Human-Created Content

...and AI-generated content fed back into the datasets

- Did the creators give consent?
- Are the creators compensated?
- Are the creators credited?
- Is personal and/or private information gathered without consent?
- Is the information gathered examined for bias and accuracy?
- Who makes profit off the end result?

Fed into a Processor

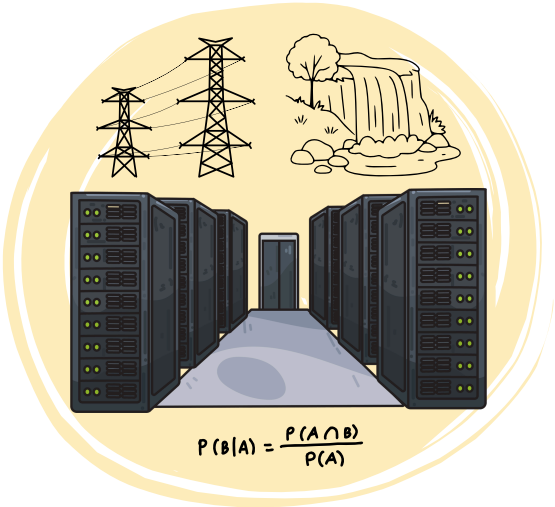

The content is filtered into datasets, which are used to train AI Systems.

AI System is Given a Task

The AI System uses probability to look through its datasets and see how likely it is for some pieces of data to go with others in order to match the instruction.

Data Center Works to Provide the Output

Did the people responsible for the AI systems and data centers take steps to reduce the harm of the effects? Some examples:

- Energy usage that raises electricity costs
- Energy usage that increases pollution rates
- Water usage to cool down the machines
- The replacement of human labor
- The absorption back into the datasets of the prompts, searches, and other content entered into the AI system for the query--was this disclosed?
